# Slug hunting!

## Making a harmless slug trap

The trap is designed to let slugs in but not out. Once you have carried out your survey, the slugs should be returned to the place where you found them.

1. Use a plastic cup or a salad carton with a lid.

2. Cut a star shape out of the lid about 3cm across.

3. Push the sharp spikes into the carton – this will mean that the slugs can get in but can't get out.

4. Place the bait in the bottom of the cup/carton.
